PROFESSIONAL SUMMARY

Data analytics postgraduate with hands-on experience building, evaluating, and optimising machine learning models using Python and R, alongside SQL data modelling and Power BI reporting. Proven ability to benchmark models, tune hyperparameters, and communicate statistical findings to non-technical audiences. Background in data automation, ETL-style workflows, and structured reporting.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy), R, SQL (MySQL) | **ML & Statistics:** Decision Tree, KNN, K-means clustering, regression, cross-validation, hypothesis testing | **Visualisation & BI:** Power BI, ggplot2 (R) | **Other:** Excel (Power Query, VBA), ETL/data pipeline design, data governance, Microsoft Office Suite

EDUCATION

MSc Business Data Analytics — Predicted Distinction | Bangor University | Sep 2025 – Present

- Key modules: Data Science, Coding for Business Applications, Financial Econometrics, FinTech with Project and Credit Risk Analytics

Bachelor of Business Administration | Kathmandu University | Aug 2017 – Jul 2021 | CGPA: 3.68/4.0

- Key modules: Applied Business Statistics, Econometrics, Research Methods, Project Management

WORK EXPERIENCE

Academic Literature Analyst (Intern) | Bangor University | Mar 2026 – Jun 2026

- Processed **100,000+ words** of unstructured textual data through structured ETL-style workflows, transforming raw inputs into standardised, analysis-ready formats across **50+ academic sources**
- Delivered **5–8 high-quality analytical outputs per week** across concurrent project batches, consistently meeting all deadlines
- Built a structured knowledge system with **80+ interconnected notes**, enabling efficient tagging, retrieval, and cross-referencing of research insights
- Maintained **100% consistency** in formatting and structure across all outputs using standardised templates and governed workflows

Mutual Fund Operations Associate | Nabil Investment Banking Limited | Sep 2021 – Aug 2025

- Introduced automated reporting solutions reducing report preparation time by **50%**, freeing analyst capacity for deeper modelling and investigation
- Prepared **4 regulatory compliance reports per quarter** via data automation tools, contributing to a **40% improvement in report accuracy**
- Managed comprehensive data records and produced annual financial reports for a **£14.70M AUM** fund, ensuring data integrity and regulatory compliance
- Oversaw data governance workflows and operational processes, improving department efficiency by **30%**

Portfolio Intern | Nabil Investment Banking Limited | Sep 2020 – Dec 2020

- Reconciled cash and stock positions for **100 portfolio clients**, improving reporting efficiency by **30%**
- Coordinated with **15+ share registrar companies** to resolve **£50,000** in unclaimed dividends across 50 client accounts

PROJECTS

Bangor Mobile Company: Customer Churn Prediction | R — [GitHub](#)

Telecom dataset: 20,000 customers — Decision Tree, Logistic Regression, KNN benchmarked

- Engineered an end-to-end churn prediction pipeline on **20,000 telecom customer records**, benchmarking three classification models (Decision Tree, Logistic Regression, KNN) and selecting the cross-validated Decision Tree with **AUC 0.762 and 71.2% test accuracy**, enabling proactive retention targeting for a **~49% churn-rate** customer base
- Improved baseline model performance by **1.5% in test accuracy** through systematic hyperparameter tuning (complexity parameter cp) with **10-fold cross-validation**, reducing overfitting while maintaining interpretability for non-technical stakeholders
- Applied K-means clustering (k=4, elbow-validated) on PCA-reduced features to segment **20,000 customers into 4 behaviorally distinct groups**, translating each cluster into targeted retention strategies: upselling voice packs, right-sizing plans, and prioritising VIP service
- Integrated R model outputs into a **Power BI dashboard** with real-time input sliders, enabling non-technical business users to generate instant churn predictions — bridging ML inference and operational decision-making

Exploratory Analysis of Factors Driving Exam Scores | Python — [GitHub](#)

Dataset: 6,606 students, 20 variables — end-to-end Python analytics pipeline

- Conducted end-to-end analysis on **6,600+ student records (20 variables)** using Python (Pandas, NumPy), transforming raw data into structured, analysis-ready datasets through targeted imputation, outlier validation, and feature standardisation
- Built and interpreted a linear regression model (**$R^2 = 0.93$**), quantifying performance drivers (+3.11 marks/study hour) and validating statistical relationships through hypothesis testing
- Applied data binning to identify optimal performance thresholds, revealing diminishing returns at 15–20 study hours/week — a non-linear insight invisible to standard regression analysis

RetailFlow: SQL Data Modelling & Analytics | MySQL 8.0 — [GitHub](#)

Retail e-commerce dataset — 10,194 rows, normalised star schema

- Built a normalised star schema from raw retail CSV, resolving **7 data integrity issues** to establish a clean, trusted analytical foundation for all downstream queries
- Delivered **6 views, 4 stored procedures, and 3 custom functions** as a reusable analytical layer, reducing ad-hoc query time for recurring business questions to single-line calls
- Uncovered a hidden discount policy problem: a 15% cap would deliver **+104% profit improvement (\$305K)** on just 11.5% of orders — insight invisible to standard revenue reporting

Bean and Brew Coffee Shop Analytics | R — [GitHub](#)

Commercial FMCG analytics — 4,000 transactions, 600 customers

- Quantified customer revenue concentration via Lorenz curve analysis, revealing that the **top 10% of customers drove 25%+ of total revenue** — directly motivating a targeted retention strategy
- Developed faceted revenue segmentation across **3 age bands, 2 membership tiers, and 4 calendar months**, surfacing actionable insights for loyalty programme redesign
- Automated a 4-layer order pricing engine encoding dual-tier discounts, VAT, and delivery surcharges applied consistently across all 4,000 orders

CERTIFICATIONS & COURSES

IBM — Data Analysis with Python (May 2025) | Python for Data Science (Dec 2024) | Macquarie University — Excel Fundamentals (May 2024) | Power BI (Nov 2025) | Bloomberg Spreadsheet Analysis (Nov 2025)

LANGUAGES

Fluent: English, Nepali, Hindi **Basic:** Welsh
